Summary

Software Engineer with hands-on experience building backend services, REST APIs, database-driven applications, and LLM-powered workflows. Experienced in developing full-stack applications and integrating AI capabilities into application workflows, with a focus on building and testing reliable software.

Experience

Teclusion AI Jan 2026 – Present
Software Engineer *Hyderabad, India*

- Engineered and shipped production REST API services using **Python/FastAPI**, covering request validation, business logic, error handling, and API integrations.
- Designed and integrated LLM-powered workflows using **LangChain and LLM APIs**, connecting AI capabilities with backend services and application workflows.
- Optimized database queries and backend operations across **PostgreSQL and MongoDB**, improving application performance by approximately **15%**.
- Containerized applications using **Docker** and worked with **Kubernetes** for deployment, application monitoring, and troubleshooting.
- Implemented automated testing using **Playwright**, along with unit and integration testing; contributed to debugging, code reviews, and Agile development cycles.

Technical Skills

- **Languages:** Python, JavaScript, SQL
- **Backend:** FastAPI, REST APIs, Node.js, Flask, Django
- **Frontend:** React.js, Next.js
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, CI/CD
- **AI/LLM:** LLM APIs, LangChain, Gemini
- **Tools:** Git, GitHub, Postman, Playwright

Projects

Rule Engine API System | *Python, FastAPI, REST APIs* | GitHub

- Built a **FastAPI-based rule engine** for evaluating dynamic business rules through REST APIs.
- Implemented **rule parsing, validation, and execution workflows** with modular backend components.

AI-Based Food Ordering with Diet Recommendation | *React, Node.js, MongoDB, Gemini, LangChain* | Live

- Built a **full-stack food ordering application** using React, Node.js, and MongoDB with REST API integration.
- Integrated **Gemini LLM with LangChain** to provide personalized diet recommendations based on user requirements.

Multiple Disease Prediction System | *Python, Machine Learning, Streamlit* | Live

- Developed machine learning models for multiple disease prediction, achieving approximately **92% accuracy** on the evaluated dataset.
- Built an interactive **Streamlit application** for real-time prediction and user input processing.

Education

CMR Institute of Technology Bengaluru, India
B.E. Computer Science (CGPA: 7.5/10) *Dec 2021 – Jun 2025*

Achievements

- Secured **2nd Prize** in College Exhibition for developing a **Student Management System**.
- AWS Cloud Essentials Certification – demonstrated proficiency in fundamental cloud concepts and AWS services.
